DETAILED ACTION

Claim Objections

1. Claims 11, 12 and 16-40 are objected to because of the following informalities:
In claim 11, although the emulsion is an invert emulsion, it is not necessarily a water-in-oil emulsion, since glycerin may comprise all of the internal phase. The removal of the term "water-in-oil" from claim 11 would clarify the claim. In claim 12, the term "and calcium chloride as the internal phase" appears. Since calcium chloride in water is the internal phase, not pure calcium chloride, suitable language such as "water comprising calcium chloride as the internal phase" or "and comprising calcium chloride in the internal phase" should be used. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 12 and 29-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Mueller (5232910).

Mueller teaches an invert emulsion comprising isobutyl oleate as the external phase and calcium chloride solution as the internal phase in a ratio within the scope of claim 39 (see Example 2). Example 2 teaches that the fluid comprises a barite weighting agent, emulsifiers, wetting agent (lignite) and suspending agents (bentonite)

Art Unit: 1712

as in the present claims 30 and 38. The fluid would inherently possess the properties of the present invention, since the same formulation is used. Applicants intended use as a spotting fluid, to free stuck pipes or for adding to a water-based fluid does not distinguish over the prior art (In re Pearson 181 USPQ 641).
